

# Syncer 1.2

**Overview:** Syncer was written to eliminate the frustration of reading yesterday's news because you forgot to sync your PDA that morning. Syncer initiates a hotsync automatically on the days and times you specify. The checkbox next to each day allows you to select which days are active. A different time can be specified for each day of the week by tapping on the time you want to change. All of the times can be set to the same value by using the "SET ALL" button on the right edge of the screen. Syncer can be temporarily disabled by un-checking the enabled checkbox.

## New in version 1.1:

- Times are now formatted based on your selected system preference.
- Ability to select which days are enabled has been added.

## New in version 1.2:

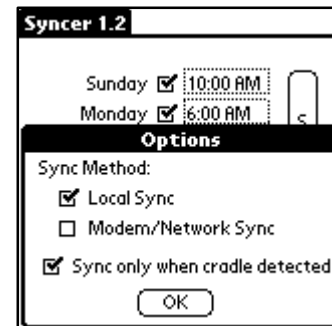

- Added option to select "Cradle Sync" or "Network/Modem Sync"
- Added option to only sync when cradle hardware detected.

## Known Bugs

- Mysteriously, syncs twice in a row in some configurations.

## Known Limitations:

- Some users report program will sync using BlueTooth others say it will not.
