

# xWeather Quick Start Guide

Begin by installing the xWeather files (xweather.prc and pnojpeglib.prc) to your Palm OS 5.x device. After you select OK on the welcome screen, you will see the initial profile manager screen.

Tap add to launch the add profile dialog. There are two ways to add a new profile to xWeather. You can add a new profile either by entering a zipcode, or by entering city and state information. After entering information, tap OK.

After entering valid information and tapping OK, xWeather will obtain the needed information to create your new profile.

# Advanced Profile Settings

Click advanced profile settings if you would like to set a custom url for radar or satellite images. (The custom radar and satellite fields support copy and paste.) The url must be for a jpeg image and must be 62k in size or smaller. You may return to the advanced profile settings at any time to make changes. Click ok to return to the profile manager. Click ok again to confirm the creation of a new profile and update the weather data.

**Advanced Profile Settings**

The advanced profile settings allow you to use custom weather images by specifying a full URL. The image must be a jpeg smaller than 64k.

☒ Use Custom Radar Image  
<http://www.weathersite.com/imag>

☒ Use Custom Satellite Image  
<http://www.weathersite.com/imag>

OK

**Edit**

Undo ✓U  
Cut ✓X  
Copy ✓C  
Paste ✓P

profile settings allow  
om weather images  
full URL. The image  
smaller than 64k.

☒ Use Custom Radar Image  
<http://www.weathersite.com/imag>

☒ Use Custom Satellite Image  
<http://www.weathersite.com/imag>

OK

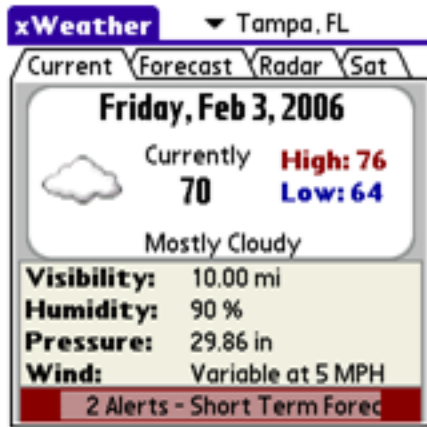

**Updating xWeather Data**

Tampa, FL

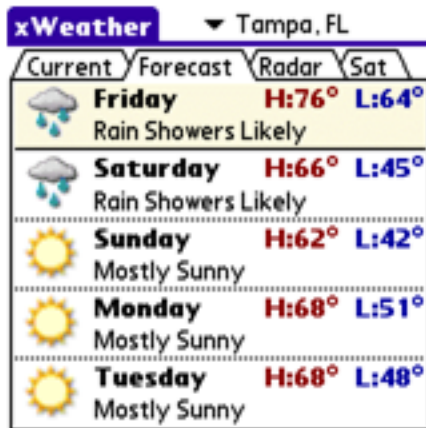

Current	2480 / 2480
Forecast	5140
Alerts	4678 / 4678
Radar	3707 / 20472
Satellite	Connecting

Cancel

# Main Screen Overview.

Special Weather Statements scroll along the bottom of the current conditions tab. Tap the red bar to read the full text of weather statements.

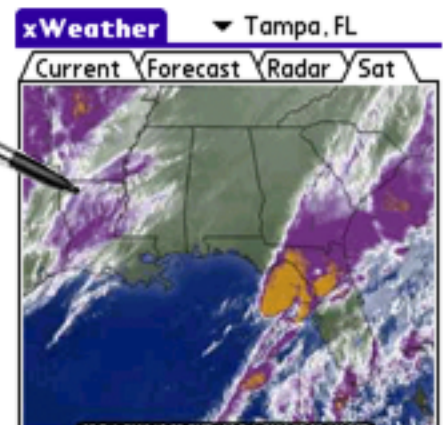

The forecast tab contains the 5 day forecast. Each day contains the high and low temps, weather summary and an icon for quick reference of the day's expected weather.

## ! Hint

Tap and drag the screen to pan radar and satellite images.

The radar and satellite tabs for each profile will contain images that can be panned to center on the area of interest. xWeather will remember the position of the image and automatically display the image at the same location the next time you view that profile.

# Menu Choices:

## Actions

### Update Profile

Update all data for the active profile.

### Update All Profiles

Update data for all existing profiles.

### Quick Update

Update only current conditions and alerts for the active profile.

### Disconnect

Disconnect the connection to the internet.

## Options

### Profile Manager

Displays the profile manager dialog, used to create, edit, and delete profiles.

### Profile Log

Displays the log for the current profile, showing timestamp and success or failure for the last update.

### Preferences

Displays preferences dialog.

#### **Enable fast profile switching:**

Selecting this option will allow the up button on the 5 way rocker to move to the next profile, and the down button to move to the previous profile. If this option is not selected, the up button on the 5 way rocker will activate the drop down list of profiles.

#### **Disconnect after refresh:**

Disconnect from the internet after refreshing weather data.

### xWeather Credits

Shows information about the products and services that help make xWeather possible.

### About xWeather

Display the about dialog with application information such as version number.
