

# XColumns v1.1

XComsoft Ltd., 1999-2002

## TITLE

XColumns v1.1

## Category

Game

## Genre

Puzzle

## Description in brief

XColumns is nice Tetris-like game in which you should keep the well from overflowing with multicolored tiles: just try to arrange as many tiles of the same color next to each other as possible. The object of the game is to arrange the tiles on the game board such that boxes of the same color line up in sequences of three or more boxes. Any time a sequence of three or more boxes is formed, the boxes in the sequence are removed from the board.

## Features:

Full screen mode, table of records, sound, hi-color graphics.

## Platform

Windows CE 3.0 or higher SH3, MIPS and ARM CPU's

## Device support

Pocket PC, Pocket PC 2002

## License type

Shareware (7-days trial period)

## Size (RAM usage ,kb)

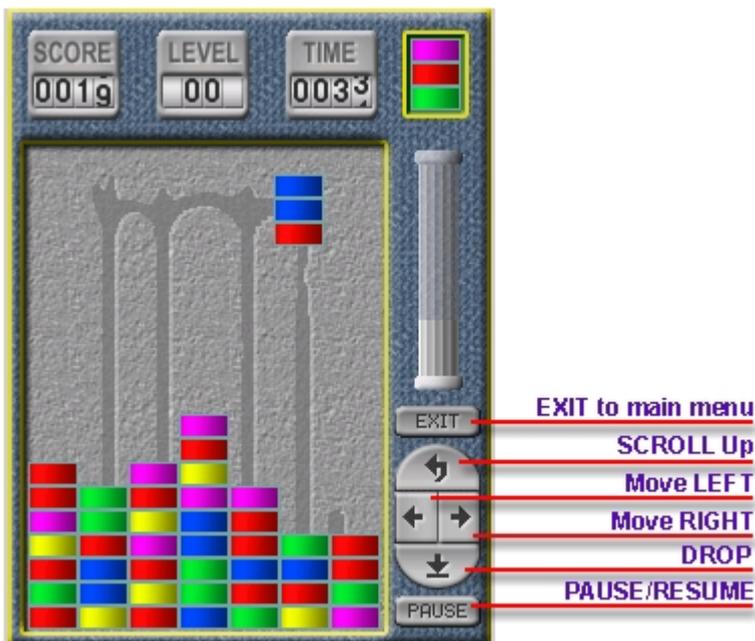

360 KB

## Installation

Click the program sign on your desktop and follow the common instructions. Installation will be done automatically.

## Description

XColumns is a single-player game in which one attempts to manipulate multicolored tiles in order to form sequences of three boxes of the same color - arranged horizontally, vertically, or diagonally. The playing tiles drop from the top of the screen, and are comprised of 3 boxes arranged in a column - each box has one of 5 possible colors. Tiles drop one at a time, and may be manipulated in one of five different ways: 1) moving the tile one column to the left (the left command), 2) moving the tile one column to the right (right), 3) cycling the colors upward within the tile (scroll up), 4) cycling the colors downward within the tile (scroll down), 5) dropping the tile straight down into place (drop). You can apply the right, left, and cycle commands as often as you wish while the tile is falling. The object of the game is to arrange the tiles on the game board such that boxes of the same color line up in sequences of three or more boxes. Any time a sequence of three or more boxes is formed, the boxes in the sequence are removed from the board, and all boxes located above those removed collapse to occupy the vacated squares on the game board. If the new arrangement of boxes (after the collapse) forms more sequences, these are also removed and points are scored.

The "XColumns" is a shareware (7-days trial period)
